| 10001.json | barely-true | Data on violent crime shows Wisconsin has become less safe than it was when Scott Walker took office. | Reason: The statement is based on a partial picture of the available data on violent crime in Wisconsin. While it is true that the violent crime rate increased in 2012, it fails to consider the overall trend during Scott Walker's tenure as governor. The available data only cover about half of Walker's time in office, making it difficult to draw a definitive conclusion about the state's safety compared to when he took office. Additionally, the rate of violent crime can be influenced by various factors beyond the control of the governor. Therefore, while there may be some validity to the claim, it is misleading to make a conclusive statement based on the limited data | ['A statement attribute inaccurate, and he has Social Security and Me Democrat Suzanne Bo would cut from Social "Well, that quote that not what I said."', 'The least one previous dek amount to disputing tl videos from a Septeml entitlements, and a rec before entitlements.'] | 1.json     | pants-fire  | The attorney general requir...  |
